Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total ecora direction.

nd is derived by analysis of the total store distribution.	SUMMARIES		Descriptio	AF244813 HOMC	その人の下の日本

                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes human platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F). PDGF-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGF-C receptor. C PDGF-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for simulating commertive fissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to rinding used to receptor-binding specificity of PDGF-C. PDGF-C used to induce PDGF alpha receptor activation. C profice antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in a mammal. Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of PDGF-C pDGF-C antagonists can also be used to inhibit tissue conditions, the formal population of remodelling during invasion of tumour cells into a normal population of temodelling during invasion of tumour cells into a normal population of cells. Antagonists can also be used to inhibit conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VBGF-E) polypeptide which has tranquillizer, vulnery and cardiant activity. VBGF-E can be administered therapeutically, especially by expressing encoding polymucleotides, to treat cardiovascular or endothelial disorders in mammals, especially the wastern and may especially by expressing encoding polymucleotides, to treat cardiovascular or endothelial disorders in mammals, especially cregeneration, and may especially be used to treat cardiac hypertrophy or tream to treat cardiac hypertrophy or tream to treat cardiac hypertrophy or treat angiogenic disorders in mammals (especially humans) e.g. cancer or screen for antagonists and agonists, and the antagonists administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or age-related macular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation), by contacting the antibody with a tissue sample and detecting formation of an antibody varger bolypeptide complex. Polypuclecides encoding (VBGF-E can be used to diagnose cardiovascular, and encoding to the wastern as angles. They can also be used to diagnose a tumor), by cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular, on the VBGF-E encoding sequence from of effecting a mutation in the VBGF-E encoding sequence is solated from a sample. They may also be used to probes useful to detect related as an encoding sequences or for gene mapping. This sequence encodes the human VBGF-E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TGACATCTGCCCTGGCCGGCCAGACGAGGGACTCAGGCGGAATCCAACCTGAGTAGTA 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of human vascular endothelial cell growth factor-E (VEGF-E, also referred to as PRO:200), and the polynucleotide sequence encoding it. VEGF-E is related to VEGF and bone morphogenetic protein 1. VEGF-E is useful in wound repair, as well as in the generation and regeneration of tissue. The sequences of the invention are useful for diagnosing or treating cardiovascular, endothelial or anglogenic disorders such as cancer, diabetes mellitus, cardiac hypertrophy and atherosclerosis. The polynucleotide encoding VEGF-E is useful in the gene therapy of such disorders. The present sequence encodes human VEGF-E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 1979.4; DB 25; Length 2825;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             552
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               361
                                                                                                                                                                                       Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, postriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, qualitation diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.

```
AAC7845B to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting the polypeptide for specific targeting. The polypeptide targeting the polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78877 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                          Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

The present sequence is that of cDNA clone DNA29101-1272 or UNQ174 (ATCC 20963) isolated from a human glioma cell line G61 cDNA library using probes (see AAA88522-26) based on an expressed sequence tag (see AAA88522) identified on the basis of homology to vascular endothelial growth factor (VEGF). The clone contains a single open reading frame encoding a 345-amino acid protein (see AAB19578) comparing frame encoding a 345-amino acid protein (see AAB19578) comparing frame encoding a 345-amino acid protein (see AAB19578) comparing trame encoding a 345-amino acid protein (see AAB19578) comparing trame encoding a 345-amino acid protein (see AAB19578) comparing trame encoding a 345-amino acid protein (see AAB19578) comparing the comparing production of PRO200 (VEGF-E). The invention relates to the use of PRO polypeptides, including PRO200, to delay, prevent or rescue retinal cells displaced retinal ganglion cells, displaced retinal ganglion cells, displaced macrine cells, displaced retinal ganglion cells, amacrine cells, displaced macrine cells, including Mueller cells and bipolar neurons, and supportive cells (including Mueller cells and bipolar neurons, and supportive cells (including Mueller cells and bipolar neurons, and supportive cells (including Mueller cells and coular disease selected from retinitis pigmentosa, macular cells are preferably photoreceptors and photoreceptors and photoreceptors of degeneration, including age-related, retinal detachment, retinal cells, telmopathy, retinal degenerative myopia, acute retinal neurosis syndrome, traumatic chorioretinopathies or conditions such as central or branch retinal vision coclusion, collagen vascular diseases, thrombocytopenic purpura, cedema, ischinal vasculitis and occlusion associated with Eales and systemic lupus erythematosus (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     250 cccdccchcachcacchchccccachcaccaancaccrchrcccccrcrrccrccrcc 309
